

Foundation module 6

Community mobilisation

Section 3 Community-based approaches methodologies

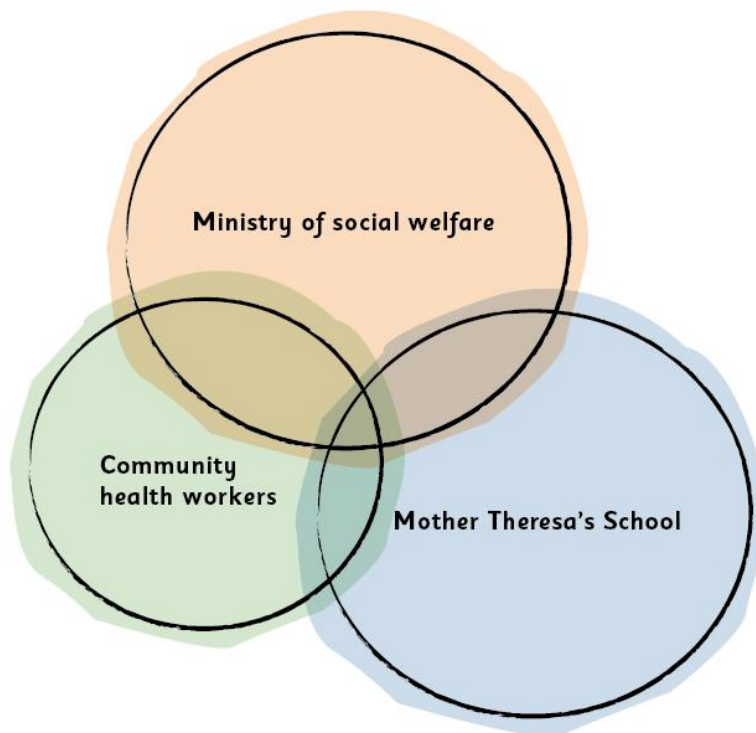

Handout 1

Methods of understanding community structures Venn diagrams

Venn diagrams can be used as a **participatory learning and action tool** to work with different groups in the community (adults or children) in order to understand:

- which formal or informal groups and structures exist in the community with a role or responsibility for the protection of children
- which are the most powerful
- the relationships between them.

Example of a Venn diagram showing:

- the relative power of groups by circle size
- the relationships between groups by the amount of overlap.
